St John

About St John

St John Papua New Guinea is a charitable, non-profit, humanitarian organisation operating in accordance with the *St John Council Incorporation Act*.

Our purpose is to serve humanity and build resilient communities through the relief and prevention of sickness and distress, suffering and danger by:

1. Making first aid a part of everyone's life; and
2. Delivering high-quality, cost-effective ambulance services to Papua New Guinea
3. Providing easy and equitable access into the health system.

St John's integrated model of delivering care makes us unique in our ability to provide people with comprehensive essential, emergency and critical care by:

- Helping the sick and injured in times of emergency by providing reliable and cost-effective ambulance for the PNG Government.
- Ensuring people can access critical medical services in PNG and abroad by providing an emergency air evacuation services with our leading critical care medical teams.
- Teaching various levels of first aid training to the community, school students, office workers, emergency responders
- Providing advanced emergency life training to hospital nurses and doctors.
- Delivering bespoke and scalable on-site medical services for industry, business and government.
- Supplying businesses, industry and hospitals with quality medical supplies and equipment

Our Mission

We are committed to making sure that people have trusted, reliable and quality emergency care when it is needed, wherever it is needed, whatever the circumstance. We will pursue excellence in health education and the provision of medical services to prevent and relieve sickness and injury and improve people's health.

**We have been a part of
Papua New Guinea since 1957.**

Our Promise.

Where no one else can. Where no one else will.

St John has been a bastion for accessible, universal health care for nine centuries. In performing their duties, the men and woman of today uphold the work of their forebearers.

St John will always stand firm in it's mission to make health care universally accessible to people, because people need care and humanity deserves protection.

We raise money to fill the gap in government funding for emergency ambulance services.

Only a portion of the public ambulance service we provide is government funded. We need to raise millions of kina each year to keep the services free to those who need them most.

When organisations choose our trusted commercial medical services and world-renowned first aid training they help us generate funds to sustain, improve and expand our public emergency health work. That's another great reason to choose St John for every project.

OUR OBJECTIVES

St John

That illness, injury and suffering are prevented or eased because first aid is a part of everyone's lives.

To provide responsive and resilient emergency and primary health care to communities in major populated areas so that people are healthier.

To reach the remotest corners of our country to bring aid when maternal, neonatal or trauma emergency arises in any community.

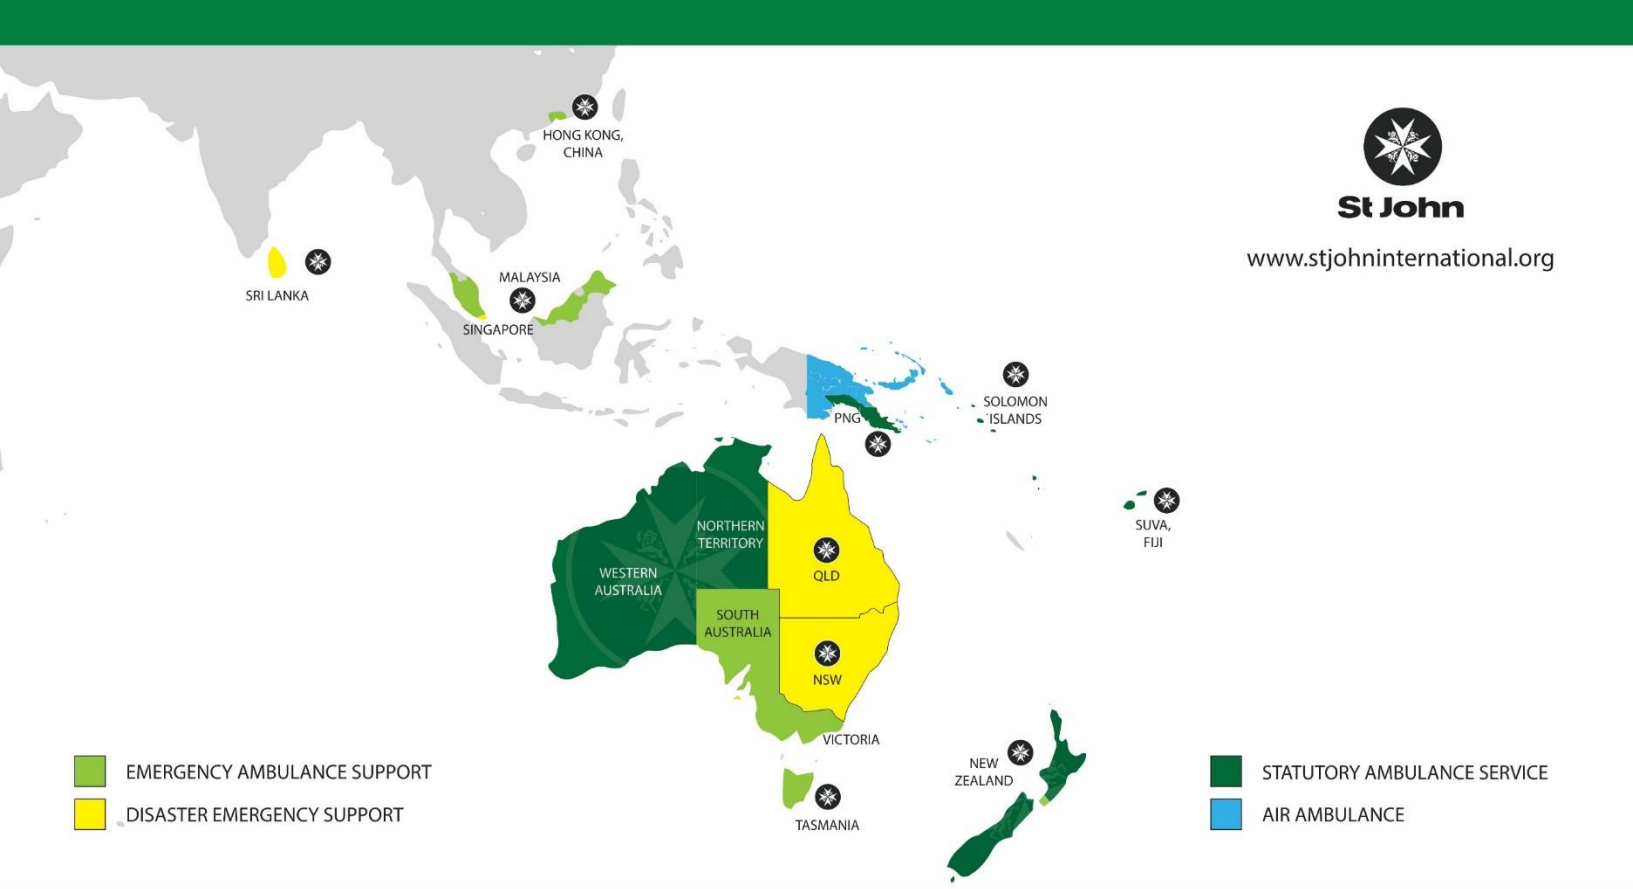

That we are the local medical provider of choice working families, business and industries.

That the people of Papua New Guinea value St John as a trusted dedicated and inimitable organisation because we are reliable in protecting people and a bastion for humanity in all that we do.

AMBULANCE

Together we cover the largest landmass of any single ambulance service in the world

And service around 60 million people in the Asia-Pacific Region

Combining PNG's leading BARS accredited charter airline with PNG's finest critical care medical specialists.

To reach the remote corners in the service of humanity

The Integrated Prehospital Care System

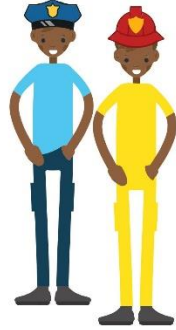

Initial First Aid

First aid is started by Members of public; saving lives in the first few minutes of an emergency situation.

Emergency Hotline

The 111 hotline helps people get immediate care. The centre coordinates all ambulances and medical aircraft.

First Responders

Police and firefighters that are trained first responders that are able to give advanced first aid immediately at the scene, and render care until an ambulance arrives.

Ambulance

The staff on every ambulance are trained and equipped to give basic life support and initial emergency stabilisation.

Advanced Care

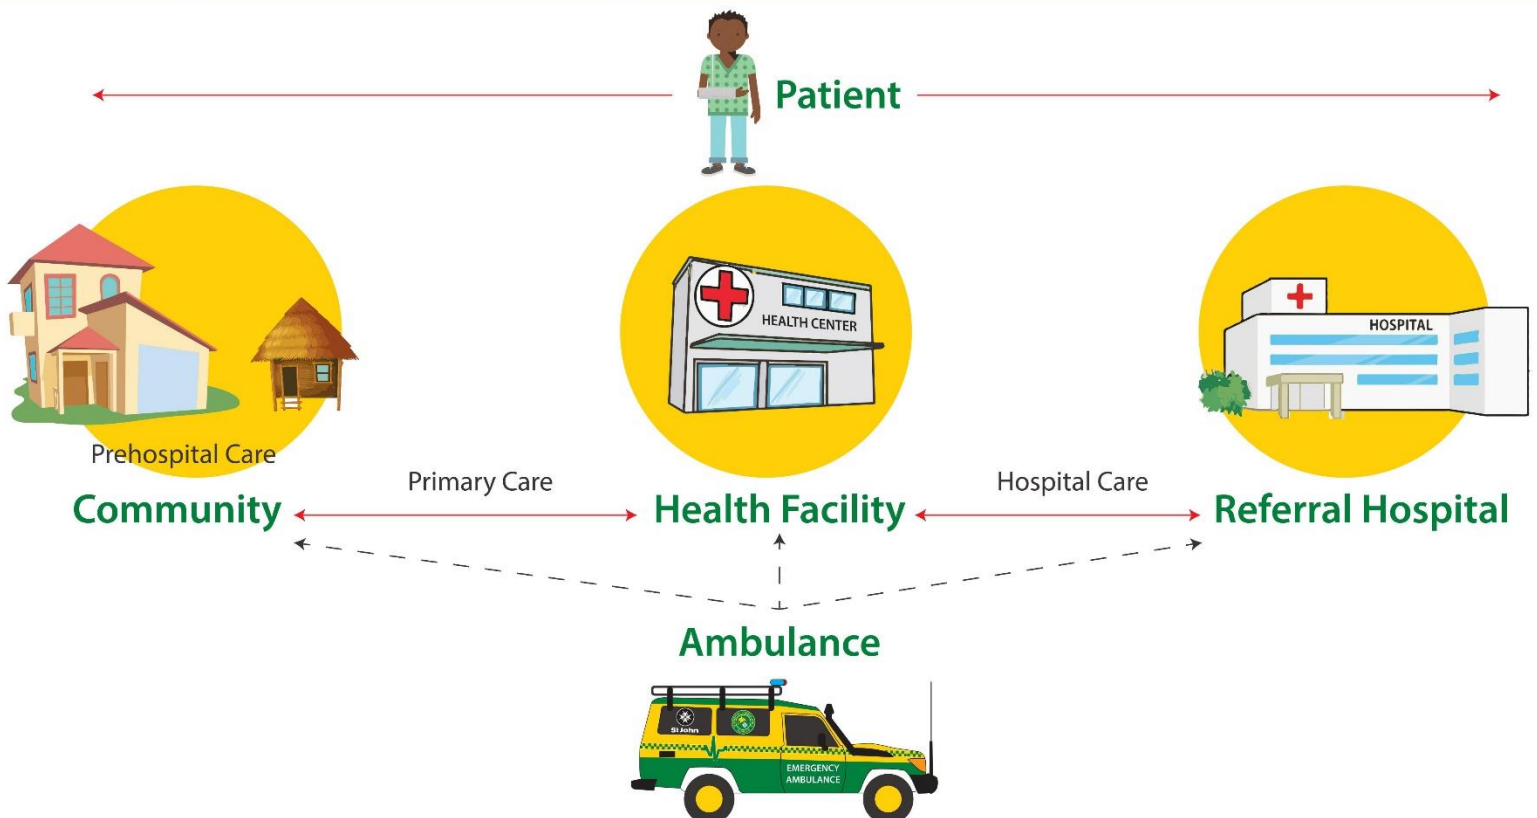

Paramedics and nurses provide additional support to ambulance crews giving advanced life support to stabilise the ill or injured at the scene.

Hospital Care

Ambulances take patients to the most appropriate health facility for their needs. Sometimes Ambulance workers can give definitive treatment and referral at the scene, avoiding the need for hospitalisation.

Ambulance Services Support the Entire Health System

Your First Aid Needs

Every home and workplace needs to be first aid ready. The range of first aid training and kits we sell are suitable for house and home, workplace and industry. We can also help develop bespoke solutions for specific projects, adventures or activities. We recommend a workplace has at least one professionally trained first aider for every 20 employees, and a first aid kit on every floor, vehicle and site.

“1 in every 20 employees should be first aid trained.”

Medical Supplies Catalogue

We sell the same brands and products that our ambulance officers use. As part of our commitment to making health care more accessible, we also have a comprehensive catalogue of emergency medical supplies for government and private health providers at affordable prices. You can download this on our website or contact us for a copy.

In an emergency dial 111 for St John Ambulance

Does your workplace
meet the proper
standards for first aid?

ST JOHN SAFE PROGRAM

St John
SAFE

The St John Safe Program officially recognises workplaces that are ready for any first aid situation.

The St John Safe workplace Program officially recognises workplaces that are first aid compliant. It is a way of identifying and communicating to employees, clients and the public that you have the right first aid training, equipment and processes in place to deal with an emergency situation.

It is recognition that your workplace has met their first aid obligations and it is peace of mind for people knowing that they are in safe hands.

How does it work?

We will come out to your workplace and conduct a St John Safe Assessment, to ensure that you have the right systems in place to achieve a safe work environment and to mitigate risk.

Our first aid officer will compile detailed recommendations to assist you in becoming St John Safe. We will work with you to create a bespoke package that may include:

First Aid Training:

First aid training for your staff, assisting you in having an appropriate level of trained first aiders for the size of your business and nature of your work.

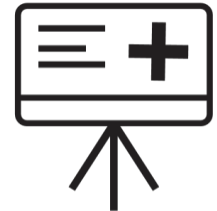

Defibrillators:

Provision of defibrillators, making this potentially lifesaving device much more accessible.

Included is training and regular servicing.

Kits: The appropriate number and type of first aid kits will be provided. Plus let us take over the responsibility for monitoring your kit levels through our restocking service.

First Aid Drills:

First aid drills to help your workplace put into practice first aid skills covered in training. Drills may be run on-site utilising your own first aid facilities.

How can your workplace be St John Safe?

Once your St John Safe Assessment has been completed and appropriate training, equipment and systems have been implemented you will be considered St John Safe.

You will be presented a certificate to formally recognise your St John endorsement.

Book your St John Safe Assessment today Call (675) 303 1000

Our First Aid Courses

St John

St John's commercial first aid package ensure your workforce is equipped with the first aid training to assist a sick or injured person.

As a student choosing St John, you have confidence that our 200 years of global experience designing and teaching first aid means you get quality at every corner.

Since 1957, St John has been delivering first aid services to the Papua New Guinea community. We are the nation's largest first aid training provider and offer a range of nationally accredited and non-accredited courses to meet industry and individual needs.

We provide training in Port Moresby, as well as at worksites anywhere in Papua New Guinea, which makes it easy for workers to gain or maintain their first aid qualifications. Our trainers come from a variety of backgrounds, enabling them to contribute real life experiences to the training environment.

Our courses go through rigorous appraisal to get the approval of our leading paramedics and doctors meaning that what you are taught is backed by medical professionals.

Basic First Aid

Formerly Emergency First Aid

HLTAID002 Provide Basic Emergency First Aid

St John

AT A GLANCE

Duration: 1 day

Prerequisites: None

Recertification: St John Ambulance recommends that you undertake this course every three years. The Australian Resuscitation Council recommends that CPR skills are refreshed every 12 months.

Content:

- » DRSABCD action plan
- » Principles of first aid and chain of survival
- » Legal issues and infection control
- » Basic anatomy and physiology considerations in provision of first aid
- » Choking and airway obstruction
- » Asthma
- » Chest pain
- » Use of Automated External Defibrillator
- » Stress management awareness
- » Legal, workplace and community consideration

Management of:

- » Hazard assessment to minimise risk
- » Checking for normal breathing and recognising abnormal breathing
- » Chest pain
- » Allergic reactions
- » Choking and airway obstruction
- Airway obstruction due to body positioning
- » Severe bleeding
- » Shock
- » Cardiac Arrest
- Four minutes of uninterrupted Cardiopulmonary Resuscitation on an adult resuscitation manikin placed on the floor.
- Four minutes of uninterrupted Cardiopulmonary Resuscitation on an infant manikin placed on a firm surface

This course will provide you with the skills and knowledge to recognise and respond to life threatening emergencies in a range of situations.

As well as learning how to respond to an unconscious casualty, this course will outline the chain of survival and DRSABCD action plan, and will deliver the skills required to use an Automated External Defibrillator.

With training covering severe allergic and anaphylactic reactions, along with asthma and injury emergencies, anyone who requires or desires a statement of attainment in basic first aid should attend.

A statement of attainment is issued to successful participants.

PNG First Aid Kit

677502

Features:

- Waterproof canvas case
- Reflective strip
- Heavy duty stitching and zippers
- Multi storage sleeves
- Rigid base non-slip

Perfect for:

- Work
- Home
- Office
- Vehicle
- Outdoor Adventures
- Marine

RECOMMENDATION:

This kit compliments the Emergency First Aid Course.

Baby First Aid Kit

640025

Dimensions: 265mm x 185mm x 90mm

Features:

An essential easy-to-carry kit for parents and carers of babies and toddlers, which contains useful contents to monitor temperatures, treat minor scratches and to manage unexpected accidents on the go.

Perfect for:

- Mothers and Babies
- Parents
- Families

RECOMMENDATION:

Our Tiny-Tots First Aid program is perfect for new parents. The course covers the essentials for keeping bub well.

Work Place Modular Wall-mount 640060

Size: 38 x 32.5 x 20 cm

Features:

- 6 modules (which can be purchased individually)
- Strong metal wall mount with lockable key
- Can be mounted

Perfect for:

- Office
- Work
- Industrial Environments

RECOMMENDATION:

This kit is most useful with the Advanced First Aid or Provide First Aid course.

Work Place National First Aid Kit 677502

Size: 400 x 220 x 200mm

Features:

- Durable and portable case can be transported anywhere that accidents happen.

Perfect for:

- Office
- Work
- Industrial Environments

RECOMMENDATION:

This kit is most useful with the Advanced First Aid or Provide First Aid course.

Modular Trauma FIRST RESPONSE KIT

640070

Features:

The Modular Trauma Pack has been developed for high risk environments and remote locations including mining and construction industries.

RECOMMENDATION:

This kit is most useful with the Advanced First Aid or Provide First Aid course.

Perfect for:

- Office
- Work
- Industrial Environments

E Scale Marine First Aid Kit Non-Medicated

616503

Features:

Packaged in easy access waterproof containers including detachable bracket for installation.

This kit conforms to Marine Board Survey Equipment Scale E Regulations. Medical items are required but not included in this kit.

Suitable for:

- Restricted passenger vessels (within 30 nautical miles of the coast)
- Fishing vessels within 200 nautical miles of the coast
- Australian Register of Therapeutic Goods ARTG-194063

Pet Kit

600401

Dimensions:

240mm x 180mm x 90mm

Features:

A first aid kit especially for your four-legged furry family members! Designed for pre and post vet care, the kit has a range of dressings inside to help you care for your injured pet.

FIRST AID PRODUCTS

FIRST AID KIT REFILL

FIRST AID KIT REFILL – WORK PLACE ESSENTIALS (refill pack) 677505

The Workplace essentials refill pack comprises of a range of comprehensive first aid components. Its suitable for medium to large working environments (Office warehouse, factory etc.) It is used to replenish all national first aid workplace kits from large national workplace (wall-mount / portable) to small national workplace kits.

Major Bleeding and Snakebite Module

“If you could only carry one small module to save your life in a severe bleeding situation, THIS WOULD BE IT!” – CEO, St John PNG

The Major Bleeding & Snakebite Module is suitable for helping to treat serious wounds with major bleeding, particularly those caused by violence, knife or gunshot. At the same time, the two (2) snakebite bandages can be used to treat envenomation. The Module can be used on its own or as an add-on to our other kits.

Contents:

- Module kit
- 1064 Compression bandage extra firm (snakebite ready) (x2)
- 2091 Wound dressing No.15 (x2)
- Nitrile glove - Large (x2)
- 1126 Tape hypoallergenic 1.25cm wide
- 3030 Shears, universal

St John ambulances carry resuscitation equipment and medicines that many clinics don't have.

When a baby is born not breathing; when a new mother hasn't stopped bleeding; it's this equipment and medicine that is the difference between life and death.

We are working in partnership to bring emergency care to over a million people in the areas we operate.

DID YOU KNOW?

A surgical mask is intended to be worn by health professionals during surgery and during nursing to catch the bacteria shed in liquid droplets and aerosols from the wearer's mouth and nose.

A surgical mask can also be worn by someone who has a respiratory infection to prevent other people from catching their illness.

♥ HEART SAFE

St John

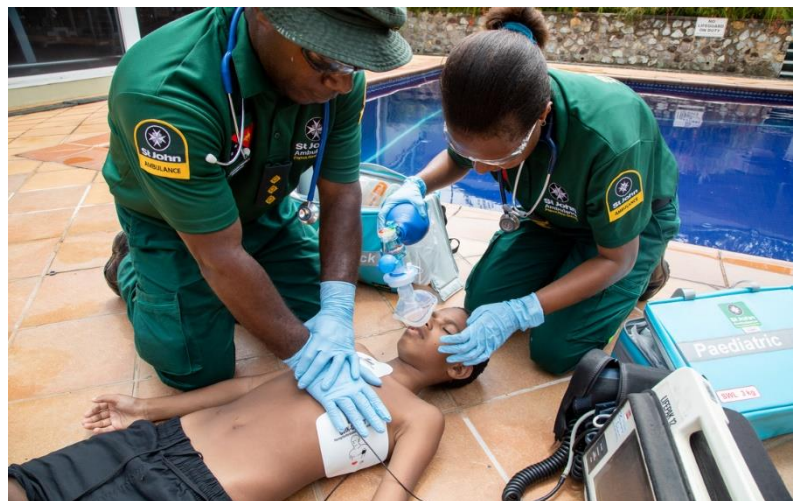

AEDs are recommended at workplaces, hotels and airports. Many businesses are choosing to be 'heart safe' by having a defibrillator (AED) available at their worksite.

If a person is in cardiac arrest, collapsed and not breathing their heart may need a controlled electrical shock to try make it beat properly again.

An automated external defibrillator (AED) is a fully automated medical device that detects if a person is in cardiac arrest by analysing the heart's activity. The AED gives instructions too. If the AED determines a person needs a shock to save their life, the machine will talk to you and then deliver the shock. If no shock is needed, the AED will give you instructions which you should follow.

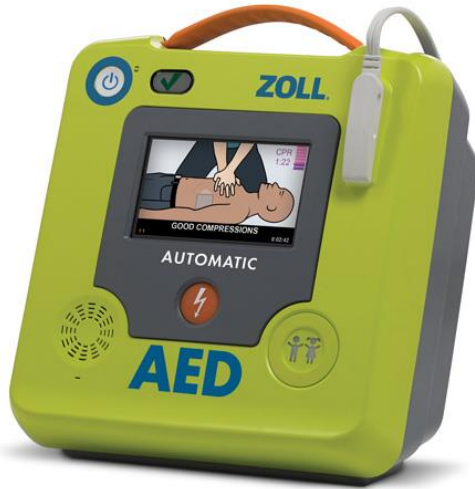

AEDs are very safe and easy to use. A person can be taught to use an AED during one of our first aid courses. To have most life-saving effect, AEDs should be easy to reach, accessible at all times and ideally be within two minutes walking distance from wherever people work or play.

For each minute, that a person is left untreated in cardiac arrest, the chance of survival drops by about ten percent. Even if they are alerted immediately, emergency teams take some time to arrive. For this reason, automated external defibrillators have been placed in locations where they are easily accessible, such as airports, gyms and hotels.
